ABSTRACT

A user activated, disposable insect bait station particularly adapted for use with liquid bait, including attractants and toxicants is disclosed. The bait station is formed as a sealed container fabricated from two primary parts, an upper half and a lower half sealingly connected along common peripheral edges. The bait station includes first and second internal chambers. The first internal chamber contains a liquid bait reservoir wherein all of the liquid bait is stored prior to use, and the second internal chamber is adapted to function as an entrance providing insects access to the second chamber. Manual manipulation of the bait station is required for activation whereby a frangible seal is broken placing the first and second chambers in fluid communication thereby allowing liquid bait to flow into the second chamber.
